Julian Palomo

Senior Software Engineer

Glasgow, UK

julianpalomo.dev | linkedin.com/in/julianpalomo | github.com/julian-palomo

Settled status — full right to work in the UK, no sponsorship required | Open to remote (UK) or hybrid in Glasgow / Edinburgh

Professional Summary

Senior software engineer with **10+ years** in the industry and **7+ years of React**, including four years as a senior frontend engineer on Motors.co.uk / Cazoo, a UK car marketplace with 500–700k monthly users: React 17→19, Redux→Zustand, the move to GA4 and GrowthBook feature flags. Full stack beyond the browser: serverless AWS (Node.js, Lambda, MongoDB) and, since May 2026, Form:at, an offline-first PWA on Cloudflare Workers, D1 and R2 that I built alone and run in production.

Technical Skills

Core: React (**7+ yrs**), TypeScript (**5 yrs**), JavaScript (**10+ yrs**), Node.js (**3+ yrs**), Next.js, HTML5, CSS3

Frontend: Zustand, Redux, React Compiler, React Native, TanStack Start, Tailwind CSS, SASS, design systems and component libraries (Storybook)

Web platform: PWA, Service Workers, IndexedDB, Web Push, Media Session API, web performance (Core Web Vitals, Lighthouse)

Backend & Cloud: Cloudflare (Workers, Pages, D1, R2), AWS (Lambda, API Gateway, S3, Cognito), Node.js, MongoDB, SQL (SQLite), REST, GraphQL (working knowledge), Microsoft Azure

Testing & Quality: Vitest, Jest, React Testing Library, Playwright, Cypress, Sentry, Knip, Biome

Analytics & Experimentation: Google Analytics 4, GrowthBook, A/B testing, feature flags

AI-Assisted Development: Claude Code, GitHub Copilot (code review workflow), agent context files (AGENTS.md / CLAUDE.md)

Tooling & Delivery: pnpm, Turborepo, GitHub Actions, Azure DevOps, Bitbucket Pipelines, Agile/Scrum

Languages: Spanish (native), English (full professional proficiency)

Selected Projects

Form:at — offline-first PWA for a Glasgow electronic music collective

Personal project, built solo | May 2026 – present | formatglasgow.com | github.com/julian-palomo/form-at

- Designed, built and run in production on my own (**500+ commits**): a PWA that saves 90-minute mixes (**100–220MB** each) for playback with no signal, using IndexedDB with a storage-quota pre-flight, a custom service worker that serves HTTP Range requests for seeking, and lock-screen playback through the Media Session API.
- Full stack on Cloudflare: TanStack Start (React 19) on Pages/Workers, D1 (SQLite) for the catalogue and analytics, R2 for audio with versioned immutable keys, direct-to-R2 presigned uploads for 220MB files, and Web Push sending that runs on Workers.
- Admin dashboard behind Cloudflare Access, with server-side JWT verification on every write endpoint; a scheduled Worker archives real-user-monitoring data into D1.
- pnpm + Turborepo monorepo with a shared design system (Storybook, Chromatic visual tests), Vitest and Playwright tests on Chromium and WebKit, and CI/CD on GitHub Actions; built AI-assisted with Claude Code under a written agent working agreement (CLAUDE.md).

julianpalomo.dev — personal site with an AI assistant that answers only from facts I have confirmed

Personal project | October 2026 – present | julianpalomo.dev | github.com/julian-palomo/julianpalomo.dev

- TanStack Start (React 19) on Cloudflare Workers. The assistant runs on Claude through the Vercel AI SDK, with read-only tools that only return facts I have confirmed, and every fact an answer cites must be one it looked up.
- Daily limits in Cloudflare D1: **30 questions per visitor** and a global spend cap, with visitors counted by a hash that changes every day, never by their IP.
- LLM evals in CI: the real assistant answers the eval cases and a second model, calibrated before each run, judges every answer sentence by sentence. They run in CI when a run-evals label is added to a pull request that touches the assistant, its facts or the evals.
- Built with Claude Code under a written agent setup: AGENTS.md, rules, hooks, skills and reviewer subagents.

Professional Experience

Senior Frontend Engineer — Cazoo (formerly Motors.co.uk), Glasgow, UK — Remote

July 2022 – August 2026

- Frontend engineer in a cross-functional squad (backend, QA, design, product manager, engineering manager) on Motors.co.uk, a UK car marketplace with **~250,000 vehicles** from **4,000+ dealers** and **500–700k monthly users** (~1M sessions a month).

- Upgraded the ASP.NET/React (ReactJS.NET) monolith from **React 17 to 19** in two phases: moved rendering to hydrateRoot and refactored the server-rendered views onto a new renderComponent API (**70+ files**), moved the build to Node 22, upgraded Cypress, and adopted React 19 patterns (use(), no forwardRef) with Sentry error classification.
- Replaced Redux entirely with **Zustand** in the monolith (**16 domain slices**: search, shortlist, lead forms, account, dealer reviews, vehicle pages; **~240 files**) and documented the new store for the team, then adopted the **React Compiler** and removed manual useMemo/useCallback.
- Moved analytics to **GA4** across both web apps: rebuilt the Next.js app's tracking on a single data layer (page, navigation and e-commerce events; **58 files**) and removed the legacy Universal Analytics tracking and old GTM container from the monolith (**300+ files**).
- Connected the Next.js app to **GrowthBook** feature flags served by the monolith, sent experiment exposure events to the GA4 data layer, and built an internal page and debug badge to QA flags before release.
- Lazy-loaded the OneTrust consent banner in the monolith after the page's load event, taking a third-party script out of the initial page load as part of the team's Core Web Vitals work.
- Worked day to day with backend, QA, design and the product manager from planning to release.

Lead Full Stack Developer — Orders Made Simple, Edinburgh, UK
September 2021 – May 2022

- Promoted from Full Stack Developer to lead after **six months**.
- Technical lead for a team of **4 developers** across web (React), mobile (React Native) and a serverless Node.js backend: owned technical decisions and mentored the junior engineers.
- Ran the serverless AWS platform (Lambda, API Gateway, S3, Cognito, Netlify) and its Bitbucket Pipelines deployments, plus three MongoDB databases, one per environment.

Full Stack Developer — Orders Made Simple, Edinburgh, UK
March 2021 – September 2021

- Delivered features across three codebases: React (web), React Native (mobile app) and Node.js (serverless backend).
- Inherited three undocumented projects and new-to-me technologies (React Native, Lambda, MongoDB); ran knowledge-transfer sessions so the team no longer depended on one person.

Front End Developer — Markup, Glasgow, UK
September 2019 – March 2021

- Built and maintained e-commerce web applications for an international fashion brand (Gant), in a mid-sized agile team.
- Built components in a shared design system and component library; modelled content in Contentful; refactored legacy code into modern structures.

Front End Software Engineer — Stampede (formerly BlackBx), Edinburgh, UK
November 2018 – June 2019

- Refactored legacy AngularJS websites into React with TypeScript, with unit tests in Jest and React Testing Library, working with designers, backend engineers and product owners.

Career Transition — Salamanca, Spain → Scotland, UK
September 2017 – October 2018

- Self-directed reskilling from enterprise tooling (WebRatio, Groovy, Java) into React, Redux and TypeScript while relocating to Scotland.

Earlier Experience

Software Developer — Homeria Open Solutions, Cáceres, Spain
October 2014 – July 2017

- Built and maintained client projects including Burger King's home-delivery platform (master-slave clustering on AWS for peak order volumes); developed frontend modules and onboarded new team members.

Web Developer — Looplay Music, Badajoz, Spain
April 2013 – June 2014

- Designed and built the company blog and corporate website; contributed to architecture and application design decisions.

Certifications

Claude Code 101 — Anthropic (Claude Academy), October 2026

Microsoft Certified: Azure Fundamentals — Microsoft, January 2026

Education

Computer Engineering — Universidad de Extremadura, Cáceres, Spain, 2002 – 2009
